The following clinical studies are recruiting patients at UW Veterinary Care. Many trials provide a **reduction in the cost of treatment**. More information can be found on our webpage: [uwveterinarycare.wisc.edu/clinical-studies](http://uwveterinarycare.wisc.edu/clinical-studies), or you may call the clinic and speak to Amanda Brooks, our clinical research technician: **608-890-3484**. Thank you for helping improve the health of animals.

- **Dermatology**
  - Dogs with Recurrent **Pyoderma** – evaluate efficacy of staphylococcal vaccine
- **Emergency and Critical Care**
  - Dogs with newly diagnosed **Immune-Mediated Hemolytic Anemia (IMHA)** or **Immune-Mediated Thrombocytopenia (ITP)** – investigate blood cell percentages to develop a new therapy
  - Dogs with **Nasogastric Tube** placement—investigate esophageal placement of nasal feeding tube with ultrasound prior to radiography
- **General Surgery**
  - Dogs (any breed) with **Laryngeal Paralysis** and pure-bred **Labrador Retrievers & Golden Retrievers** older than 11 years of age without Laryngeal Paralysis – investigate genetic heritability
  - Dogs undergoing **Laryngeal Paralysis Surgery** – evaluate activity level before and after surgery
  - Dogs with **Mast Cell Tumors >2cm** – compare samples from punch biopsy to whole tumor specimen
- **Internal Medicine**
  - **Boxer dogs** with **Lymphoma** – investigate genetic and environmental risk factors
  - Cats with **Chronic Kidney Disease (CKD) Stage 1 and Stage 2** – looking at isoprostanes in urine and plasma
  - Dogs with **Aspiration Pneumonia** – looking to shorten duration of antibiotics
  - Dogs with **Bladder Tumors** – investigate environmental risk factors
  - Dogs with **Enterococcus Urinary Tract Infection** – investigate risk factors of recurrent infection
- **Neurology**
  - Cats with **Seizures** – recruiting records from cats receiving only oral phenobarbital for seizures
  - Cats with **Seizures** – evaluate cause and effect of seizures on the brain in cats following euthanasia
  - Dogs with **Thoracolumbar IVDH Hansen type I** – evaluate efficacy of antimicrobial treatment for subclinical bacteriuria following surgical decompression
- **Oncology**
  - **Boxer dogs** with **Lymphoma** – investigate genetic and environmental risk factors
  - Cats with **Any Cancer** – evaluate palladia in combination with doxorubicin
  - Dogs with **Lung Tumors or Nodules** – evaluate slow CT scan for depiction of breathing motion causing a distortion in the image
  - Dogs with **Osteosarcoma** – evaluate the efficacy of treatment with an attenuated bacterial agent following surgery and carboplatin in dogs with osteosarcoma of the humerus with an elevated alkaline phosphatase level
- **Ophthalmology**
  - **Siberian Huskies** 10+ years old or with a history of glaucoma – investigate genetic basis of glaucoma
- **Orthopedics**
  - **Labrador Retrievers & Rottweilers** with and without **Cruciate Disease** – investigate genetic heritability. Note: unaffected dogs over 8 years of age needed as controls.
