

# Does your dog have **Blastomycosis?**

## Join our research study today!

Even with long treatment times, as many as 20% of dogs can relapse. We want to learn if PET/CT scans can improve diagnosis and treatment of blastomycosis.

### Is your dog eligible?

- ✓ Positive urine antigen test
- ✓ Within or before their first week of treatment
- ✓ Able to undergo general anesthesia
- ✓ Able to travel to Madison, WI for one scan at the start of treatment and one scan at the end of treatment

### What are the study benefits?

- ✓ Two **FREE** PET/CT scans
- ✓ Pre-anesthetic bloodwork, if needed
- ✓ Helping future dogs with blastomycosis

### Interested? Scan here!
